CODESCHOOL · PROPOSAL FOR [SCHOOL NAME] · DRAFT

Online Programme

Computational Thinking, coding and AI for Classes 3-8 on shared school devices, with automatic checking, a teacher dashboard and report-card export.

Prepared by Anoop Dobhal, CodeSchool · [Phone] · [Email]

Draft version 0.1 · 6 November 2026

Aligned to CBSE's CT&AI curriculum for Classes 3-8 (2026-27)

A separate Offline Programme proposal is available

Draft

This is a draft for discussion. Scope, timeline, technical requirements and prices are indicative and will be finalised with [School name] after the pilot discussion. Nothing in this document is a commitment until both sides sign an agreement, including a data processing agreement.

1. Proposal at a glance

CodeSchool proposes a **free pilot** of its Online Programme at [School name], followed, if the school is satisfied, by adoption for the 2027-28 session. Students practise CT, coding and AI levels on the school's shared devices, the platform checks their work, and teachers see progress on a class dashboard.

Item	Proposal
What	Level-based CT, block coding and hands-on AI on an Android app and in the browser, plus project kits, teacher scripts, a class dashboard and report-card export
Classes	3-8 (pilot in 2-3 sections, for example one Class 5 and one Class 7 section)
Pilot period	8-10 weeks, January to March 2027
Devices needed	Shared school devices: about 1 per 2 students during the lesson; a projector for teacher mode
Internet	Needed to download and sync; lessons keep working offline and sync later
Who teaches	The school's own teachers, using CodeSchool scripts and the teacher dashboard
Cost of the pilot	Free: platform access for pilot sections, teacher orientation and weekly support
After the pilot	Indicative Rs 299 + GST per student per year (school licence), or online access with the Rs 449/599 booklist packs
Student data	School-managed accounts using roll numbers, no names required; CodeSchool acts only on the school's instructions

2. Why this programme

From 2026-27, CBSE schools are asked to teach Computational Thinking and AI: **50 hours a year in Classes 3-5**, inside Mathematics and The World Around Us, and **100 hours a year in Classes 6-8** (40 hours of CT, 20 hours of AI and 40 hours of projects). CBSE's free handbooks provide maths puzzle banks and a few unplugged activities. They leave several gaps:

- **No coding.** Students follow and compare algorithms, but never write one.
- **No project materials.** Classes 6-8 have 40 project hours a year with no briefs, rubrics or examples; CBSE's announced project list with rubrics has not yet been published.
- **Hands-on AI only in Class 8**, and only with computers, webcams and internet.
- **No progress tracking.** CBSE asks for a Teacher Observation Journal but gives no template or report-card format.
- **Hard puzzles with no feedback.** Students get no hints and teachers have no quick way to see who is stuck.

The Online Programme uses the school's devices to add what paper cannot: instant checking, automatic hints, block coding on screen, AI models students train themselves, and live progress for the teacher.

> **Our approach:** we do not replace CBSE's free books. We sit on top of them, chapter by chapter, and add what is missing. Every online lesson also has a projector and paper fallback, so a lesson never stops because of a device or network problem.

3. Objectives

1. Let every student practise CT and coding at their own level, with instant feedback and hints.
2. Move students from **following** algorithms to **building** working programs, starting in Class 3.
3. Give Classes 6-8 hands-on AI every year: train a model, test it and find its bias.
4. Give Classes 6-8 complete, assessable project kits for their 40 project hours.
5. Give teachers and the coordinator a live view of progress and a report-card-ready summary.

4. Scope

What is included

Component	Description	Classes
Levels app	Short levels for each NCERT maths chapter with automatic checking, hints and challenge levels	3-8
Block coding	"Now you build it" coding levels that turn each chapter's puzzle into a program	3-8
AI lab	Browser-based activities where students train and test simple models using supplied datasets; no webcam required	6-8
Project kits	Two 20-hour projects a year: brief, datasets, worked examples and marking rubrics	6-8
Teacher mode	Run any lesson on one projector for whole-class teaching	3-8
Class dashboard	Who has finished which level, who is stuck, and class-wide trends	3-8
Progress journal and export	Competency-based records mapped to CBSE CT&AI, exportable for report cards	3-8
Teacher scripts, orientation and support	Period plans, an at-school orientation and weekly support during the pilot	All
Paper fallback	Printable versions of every lesson for days without devices	3-8

What is not included

- Hardware, devices, internet connections or lab set-up.
- A generative-AI chat tool for students (not included in the pilot).
- Replacing CBSE's handbooks or the NCERT maths textbook.
- Board-exam preparation for Classes 9-12.
- Any parent-paid home plan during the pilot.

5. Programme design

Levels that follow the maths chapters

Each lesson is tied to the NCERT maths chapter the class is studying. Students move through short levels: a warm-up, a guided level, a build level and a challenge. The platform checks answers instantly, offers a hint after repeated mistakes, and lets fast students move ahead. A short placement check at the start puts each student at a suitable level, while the teacher can keep the whole class on the same chapter.

One routine for every lesson (about 40 minutes)

Step	What happens	Minutes
1. Predict and run	Students predict what a short program will do, then run it	8
2. Investigate	Tracing questions, checked automatically	8
3. Modify	Students change the program to do something new	8
4. Parsons puzzle	Drag jumbled blocks into the right order	8
5. Make	Students build their own program and share it with a partner	6-8

Steps 1-4 are checked automatically; step 5 is creative work the teacher can view on the dashboard.

Class-by-class outline

Class	Computational thinking and coding	AI	Projects
3	Sequences, loops and events in block coding; cipher and path puzzles from the maths chapters	Sorting by features (enrichment)	Short in-app challenges
4	If-then-else choices; nested loops; debugging	Spotting patterns in examples (enrichment)	Short in-app challenges
5	Variables and inputs; search strategies; a capstone game	Training a simple picture sorter (enrichment)	Short in-app challenges
6	Custom blocks (functions); lists and data from the Data Handling chapter	What AI is; train and test a classifier with a supplied dataset	Two 20-hour projects (for example, weather data across states)
7	Data tables, charts and prediction	Classification, clustering and bias: rebalance a dataset and retrain	Two 20-hour projects (for example, a weekly food planner)
8	Reading and changing simple Python alongside blocks	The AI project cycle; no-code model building; a guided version of CBSE's Class 8 labs	Two 20-hour projects (for example, sports participation data)

Project examples follow the topics CBSE presented in its April 2026 webinar, and will be aligned to CBSE's official project list when it is published.

6. How it runs online

Element	Classes 3-5	Classes 6-8
Time	Within CBSE's 50 hours a year, about 1-2 periods a week	Within CBSE's 100 hours a year, about 3-4 periods a week
Where	Computer lab, tablets in class, or projector with students taking turns	Computer lab or tablets; projector for AI demonstrations
Who teaches	Maths or EVS teacher	Subject teachers for CT; computer teacher for AI and projects
Devices	About 1 device per 2 students during the lesson (pairs work)	About 1 device per 2 students during the lesson
Network	Lessons download in advance and work offline; results sync when online	Same; AI lab activities need a browser
Fallback	Printable lesson or projector teacher mode	Printable lesson or projector teacher mode

Technical requirements (to be confirmed in a device check)

Requirement	Minimum
Android tablets or phones	Android 9 or later, 2 GB RAM, about 500 MB free space
Computers	A current Chrome, Edge or Firefox browser on Windows, Linux or ChromeOS
Projector	Any projector or smart board with a connected teacher device
Internet	Any connection for downloads and syncing; continuous internet is not required
Website access	The CodeSchool app and website must not be blocked by the school's filter

7. Implementation plan and timeline

Phase	When	What happens	Output
1. Agree scope	December 2026	Meet principal and coordinator; choose pilot sections; device check; sign the pilot letter and data processing agreement	Signed pilot letter and agreement
2. Set up	Early January 2027	School uploads class rosters (roll numbers); app installed on devices; 2-hour teacher orientation	Accounts ready; teachers trained
3. Pilot	January to March 2027 (8-10 weeks)	Lessons run; CodeSchool monitors usage and checks in weekly; the dashboard shows progress	Lessons delivered; progress data
4. Review	Mid-March 2027	Compare results with the agreed success measures; teacher and student feedback	Short pilot report for the school
5. Decide and roll out	April 2027 (2027-28 session)	If the school continues: accounts for all chosen sections, orientation for all teachers	Programme running in all chosen classes

> **Timing:** most schools finalise next year's book list and budget in December-January, before the pilot ends. Schools that want the programme from April 2027 can decide after a demonstration and a trial login in December; the pilot then shapes how it is used.

8. Teacher support and training

- **Orientation (2 hours, at school):** the lesson routine, the teacher dashboard, teacher mode on a projector, and what to do when devices or internet fail.
- **Scripts in every lesson:** timings, what to say, answers and common mistakes.
- **Dashboard prompts:** which students are stuck and which level the class should do next.
- **Weekly check-in during the pilot:** 15 minutes by phone or WhatsApp, plus a shared question channel.
- **Short how-to videos** inside the teacher view.
- **No specialist needed:** maths and EVS teachers can run Classes 3-5; the computer teacher leads AI and projects in Classes 6-8, as CBSE suggests.

9. Assessment and reporting

- **Automatic level checks:** every level is scored instantly, with mastery shown per chapter.
- **Progress journal:** competency records mapped to CBSE's CT&AI competencies (abstraction, pattern recognition, decomposition and algorithmic thinking, plus AI literacy for Classes 6-8), with space for teacher observations.
- **Project rubrics:** criteria and score bands for every project; teachers score on screen or on paper.
- **Report-card export:** a term summary per student, ready to copy into the school's report card.
- **Baseline and end check:** a 15-minute puzzle check at the start and end of the pilot to show progress.

10. What we need from the school

Need	Detail
A pilot lead	The coordinator or a senior teacher as our single point of contact
An IT contact	Someone who can install the app and check website access
Teachers	One named teacher per pilot section, available for the 2-hour orientation
Devices and timetable	Access to the lab or tablets for the agreed periods each week
Class rosters	Roll number, class and section for pilot students (names optional and kept by the school)
Parent consent	The school informs parents and records consent using its admission records; CodeSchool provides the notice and form
Feedback	Two short feedback conversations (mid-pilot and end)

11. Child safety and data protection

CodeSchool is designed to work as a **data processor for the school**. The school decides what data is used and remains in control of it, in line with India's Digital Personal Data Protection Act, 2023 and its Rules, whose obligations for children's data take full effect in May 2027.

Principle	What it means in practice
Minimum data	Accounts use the school's roll number, class and section. No photos, addresses, Aadhaar numbers or dates of birth
School in control	The school creates and removes student accounts; students cannot sign up on their own
Parent consent	Collected by the school using its admission records, with a notice and form supplied by CodeSchool in English and Hindi
No tracking or advertising	No advertising of any kind, no third-party trackers, and no behavioural profiling of students
Learning records only	We record scores on curriculum levels that teachers can see, not behaviour
No AI training on student data	Student work is never used to train AI models
Data in India	Data is stored in an Indian cloud region and protected by access controls and encryption
Deletion	Student data is deleted at the end of the agreement, or earlier on the school's request
Breach response	Prompt notice to the school, and reporting as Indian law requires
Written agreement	A data processing agreement is signed with the school before any student data is shared

12. Pilot success measures

These are agreed in advance so the pilot result is clear to both sides. Targets are suggestions and can be changed.

Area	Measure	Suggested target
Teacher delivery	Planned pilot periods the teacher ran without outside help	80%
Fit	Lessons that fit within one period	90%
Learning	Students reaching mastery on each chapter's levels	70%
Use	Pilot students active in the platform each week	80%
Reliability	Lessons completed despite device or network issues (using fallback if needed)	95%
Teacher view	Would use it again next session (1-5)	4 or more
Reporting	Report-card export usable by the coordinator	Yes

13. Investment

The pilot

The pilot is **free**. CodeSchool provides platform access for pilot sections, the orientation and weekly support. There is no obligation to buy afterwards.

After the pilot (indicative)

Option	Includes	Indicative price
School licence	Platform access for students, teacher mode, dashboard, journal and export, teacher scripts, orientation and support	Rs 299 per student per year + 18% GST, paid by the school
Booklist pack with online access	Printed workbook plus school-activated online access, project kits and journal	Rs 449 (Classes 3-5) or Rs 599 (Classes 6-8) per student per year (MRP), on the school's book list

- The booklist pack can **replace the existing Computers book**, so the total cost to parents stays about the same.
- Booklist packs are also available from booksellers and online, so **no parent is required to buy from one source**. Access is still activated through the school's accounts.
- **No new fee head** is needed.
- Prices are indicative and will be confirmed after the pilot.

14. Roles and responsibilities

Task	CodeSchool	School
Platform, lessons, kits and scripts	Provides	Reviews
Device check and app installation	Guides	IT contact installs
Student accounts	Sets up from the roster	Provides roster; manages changes
Parent notice and consent	Supplies notice and form	Informs parents and records consent
Teacher orientation and weekly support	Leads	Releases teachers to attend
Teaching the lessons	Supports	Delivers
Data protection	Acts as processor under the agreement	Acts as data fiduciary; approves data use
Pilot review and report	Prepares	Reviews and decides

15. Risks and how we manage them

Risk	How we manage it
Devices are shared or some do not work	Pair work, teacher mode on a projector, and a printable version of every lesson
Internet is slow or fails	Lessons download in advance, work offline and sync later
Teachers have little time to prepare	Every lesson has a short script and dashboard prompts
Students use the app but do not progress	Weekly usage and mastery reports to the pilot lead, with suggested next steps
Concerns about children's data	Processor model, minimum data, no advertising or tracking, written agreement, Indian hosting
CBSE publishes its own project list or rubrics	Project kits will be aligned to CBSE's topics when they are published

16. Online or offline: choosing the right fit

Question	Online Programme	Offline Programme
Student devices needed?	Yes, shared devices (about 1 per 2 students during the lesson)	No
Where students practise	App or browser, with automatic checking	Paper workbook and classroom activities
Coding	Block coding on screen	On paper, with cut-out blocks
AI	Hands-on model training with supplied datasets	Unplugged card labs; projector demonstration
Teacher reporting	Live class dashboard and report-card export	Printable journal
Student data	School-managed accounts using roll numbers	None

Many schools may prefer a **hybrid**: the Offline Programme in Classes 3-5 and the Online Programme in Classes 6-8, where the computer lab is available. See the separate Offline Programme proposal.

17. Next steps

1. A short meeting with the principal, coordinator and IT contact to agree the pilot sections.
2. A device check (about 30 minutes) and a trial login for teachers.
3. The school returns the response form below, and both sides sign the pilot letter and data processing agreement.
4. Teacher orientation and the pilot start in January 2027.

School response form

Fill this in on screen or on paper and return it to CodeSchool. It is an expression of interest, not a contract.
